SUMMARY

Data and business analyst with 5+ years of hands-on data work, including freelance projects during university and 4+ years in professional roles across advisory, technology and data science teams. Runs requirements workshops with stakeholders, turns business needs into user stories and specifications, builds data pipelines and quality checks, and delivers Tableau and Power BI reporting that teams use to make decisions. Works in agile teams using SQL, Python, Tableau, Power BI, Excel and Jira.

EXPERIENCE

Business Data Analyst / Product Owner

Sigel Advisory Partners **August 2025 – Present, Abuja, Nigeria**

- Act as product owner across the company's projects, prioritising the backlog and making key product decisions with stakeholders.
- Lead requirements-gathering workshops with 6+ business and technical stakeholders, turning business needs into user stories, process workflows and technical specifications, which cut rework by about 20%.
- Design and run data quality checks across structured datasets, keeping reporting accuracy above 95%.
- Track 50+ monthly business performance metrics in SQL and Tableau; refinements to the forecasting model improved forecast accuracy by 12% over 15 months.
- Deliver analysis of structured and unstructured data that informed three product and business improvement initiatives.

Business Analyst

Outsource Global Technologies Limited **May 2025 – Present, Abuja, Nigeria**

- Turn user requirements into functional specifications with cross-functional teams, keeping client objectives and technical deliverables aligned so sprint milestones are met on schedule.
- Facilitate 15+ stakeholder interviews and workshops for requirements elicitation, producing documentation that cut clarification back-and-forth by about 30%.
- Identified and documented 10+ workflow improvement opportunities through process reviews across 4 project deliverables.
- Manage tasks and track progress in Jira within an agile framework, keeping sprint status visible across 3 cross-functional teams.

Associate Business Analyst

Outsource Global Technologies Limited **November 2023 – April 2025, Abuja, Nigeria**

- Mapped business processes across 5 operational areas and identified manual steps for automation, reducing manual processing time by about 20%.
- Worked with cross-functional teams of 8+ people to define project requirements and keep business and technical stakeholders aligned.
- Produced weekly analysis reports and dashboards used by senior leadership for planning and decision-making.
- Helped redesign three core workflows to simplify hand-offs and shorten task completion times.

Data Analyst / Data Scientist

ParadigmNest **September 2022 – October 2023, Remote**

- Built and evaluated machine learning models (Random Forest, XGBoost, SVM) for a personalised recommendation engine, improving accuracy by 22% over the baseline model.
- Redesigned the end-to-end data processing pipeline, reducing analysis turnaround time by about 60%.
- Cleaned, prepared and analysed datasets from 10+ client accounts, producing the recurring reports clients used each month.
- Monitored daily data pipelines with Python and Airflow, catching and fixing anomalies to keep 15 monthly client deliverables on schedule.

Data Analyst (Contract)

Zoena Cleaning Services **January 2023 – July 2023, Remote, Edmonton, Canada**

- Built 3 interactive Tableau dashboards giving leadership day-to-day visibility of operations, scheduling and costs.
- Ran exploratory analysis that surfaced cost-saving opportunities, contributing to about a 10% reduction in operating expenses.

- Developed SQL and Tableau data models that made recurring reports faster to produce.
- Presented findings and recommendations to leadership on customer retention and marketing spend.

PROJECTS

Airand – Bicycle Delivery Zone Business Case

Business Analysis Case Study, 2026 (simulated data) **github.com/enayds/Airand**

- Took an unfinished delivery idea for small food vendors in New Owerri from problem to tested solution; desk research reshaped the problem statement and a unit-economics model set the break-even target.
- Wrote a BRD (23 business requirements, 24 business rules) and an SRS (53 functional requirements, 38 user stories with acceptance criteria), traced back to business needs, plus wireframes for four products.
- Designed a 12-table data model, generated a 90-day dataset in Python, and wrote 23 SQL KPI queries feeding four Tableau dashboards.
- Built a 49-test UAT pack; the simulated pilot passed break-even within four weeks and pointed to a roster change rather than more staff.

AI Medcare – Medical Chatbot

Outsource Global Hackathon **github.com/M-tech1/AI-Healthcare-Diagnosis-system**

- Wrote the Software Requirements Specification (SRS) for a 5-person team, aligning the designer and developers on system requirements and reducing revision rounds.
- Helped build an AI chatbot that collects symptoms through conversation and suggests preliminary diagnoses to support patient triage.

Housing Price Prediction with Web Scraping

Academic Project **Python, BeautifulSoup**

- Scraped property listings from popular Nigerian sites such as Jiji, handling multi-page navigation and semi-structured HTML, then cleaned the data and built a model to estimate property prices.

Splendor Hotel Analysis

Tableau Public **public.tableau.com/app/profile/chinedu.egbuna/viz/SHGAnalysis/Dashboard22**

- Analysed hotel booking data to show average daily rates, revenue lost to cancellations, length of stay and seasonal booking patterns, using calculated fields, parameters and custom filters.

Sales Analysis Dashboard

Tableau Public **public.tableau.com/app/profile/chinedu.egbuna/viz/MySalesAnalysis/Dashboard2**

- Built an interactive dashboard showing sales by category, customer segment and shipping mode, with performance tracked over time.

EDUCATION

Bachelor of Science in Computer Science

Imo State University, Owerri, Imo State **2021**

CERTIFICATIONS

- Data Scientist – Qwasar Silicon Valley (2023)
- Data Analyst Nanodegree – Udacity, ALX-T programme (2022)
- Data Scientist with Python – DataCamp (2022)

SKILLS

Data analysis and BI: SQL (MySQL), Python (Pandas, NumPy, Matplotlib), Excel, SPSS, Power BI, Tableau

Business analysis: Requirements elicitation, stakeholder workshops, user stories, SRS and requirements documentation, process mapping, Agile/Scrum, Jira

Data engineering and quality: Data cleaning and preparation, data quality checks, Apache Airflow, relational database design

Data science: Machine learning, predictive modelling (Random Forest, XGBoost, SVM), web scraping (BeautifulSoup)
